

We make an elegant numbering in the presentation

math homework

How to make the numbering slides in the presentation?

In this article, we will tell you only about one of the ways to create numbering in the presentation. In fact, the options for creating numbering are a huge set. We only offer one of the possible.

So, in front of you is the task - you need to create a numbering in your presentation. Immediately the question arises: how to do it? The answer to it we will give a little later, and now let's talk a little about the process of creating a presentation. It is necessary in order to smoothly bring you to the topic of the numbering of slides.

Let's give several recommendations about creating presentations.

Remember times and forever - the entire presentation should have a certain style or design. What does it mean?

This means that the presentation should not consist of:

- 1) the mothers of different background drawings on each slide;
- 2) a large number of text on the slide;
- 3) non-contrast colors (especially this concerns the text on the slide);
- 4) one text.

Note, almost all of our "not" particles are connected with textual information on the presentation. It is not necessary to overload your presentations with excessive text - from this, your presentation will not be exactly better. Text should be at a minimum - only the most important phrases and words.

7 Main errors in Power Point presentations

An example of a good presentation

We also advise you to use some picture as a background that will match the subject of your work. Suppose your presentation on environmental protection. In this case, as a background drawing, you can put, say, a tree with a luxurious green crown. Such a thematic picture will configure your spectators and listeners on your speech, respectively, and your speech will be more successful.

However, you should not make the background picture too bright and rich color. On the contrary, apply to the picture the effect of increasing transparency, exhibiting the slider almost 100% (90% will

be enough):

How to make the numbering slides in PowerPoint?

Remember that the background should be background. This means that the background drawing should be only slightly visible, because The main emphasis should be made on the content of the main topic of the presentation.

It would also be nice if you used in each presentation some "HadLinener", i.e. Something or someone, who appeared almost on every page of your presentation and attracted the attention of your audience. It can be like a simple little animal (say, dragon or some bear), and a well-known person, which is directly or indirectly related to the topic of your presentation.

The presence of a well-known character on the slides always causes an increased interest in the public. But you just need to achieve. We hope that you will use these uncomplicated recommendations when creating your own presentations.

Remember the main rule - in all, follow the golden middle and try to approach the creation of presentations creatively.

So we smoothly and approached the main topic of this article: the creation of numbering on the slides of the presentation. Immediately let's say - it is done quite simple. The main thing here is to repeat exactly the action shown below. And then at the end of work on the creation of the numbering you will get the desired result plus the skill to create numbering in the presentation.

So, let's go. We take a ready presentation (which is why we first and gave you some recommendations about the creation of presentations so that you prepare a presentation to implement on its numbering pages). Immediately make a reservation: we work in the programMicrosoft Power Point 2010.

If you have another version of the program on your computer, then perhaps part of the commands in your version of the program will be placed as shown in the screenshots. However, we believe that if you set out the goal of creating a numbering in the presentation, then you will not stop such a tricky problem as distinctions in the versions of the programs.
